THE SPECIAL MASTER: Okay, Mr. White. MR. ECHOHAWK: Your Honor, before Mr. White begins -yesterday before Mr. Billstein was dismissed he had one matter he needed to check some figures and deliver some totals and I have those and with Mr. White's agreement, I'll just read those into the record and we'll be finished with Mr. Billstein. MR. WHITE: Your Honor, the State would stipulate and I assume the Tribes would if Mr. Billstein were to 9 testify in response to that question his answers would 10 be as Mr. Echohawk will read them. 11 THE SPECIAL MASTER: Let the record also show he is 12 in Court so if they are misread or misquoted, he can say 13 SO. 14 15 MR. ECHOHAWK: Mr. White had asked for an accounting 16 within the minor tributaries with Mr. Stetson's totals for the South Fork of Owl Creek. And Dry Cottonwood 17 Creek has 142 acres, Red Creek has 259.3 acres, Bear 18 Creek has 35 acres and Carney Creek has 57.9 acres. 19 20 THE SPECIAL MASTER: Do we need a total of those? 21 It is not necessary? 22 MR. WHITE: It is not necessary, Your Honor. THE SPECIAL MASTER: 23 All right, thank you Mr. Echohawk. 24 Mr. White. 25

BY MR. WHITE:

Mr. Toedter, I believe you indicated earlier that the difference between temporal distributions of return flow in your depletion study as opposed to your return flow study, was the result flow study including the surface return as well as ground return, is that correct?

CROSS-EXAMINATION (RESUMED)

A I'm not sure as I understand your question.

THE SPECIAL MASTER: Before you proceed, may I have a definition of the word temporal when used regarding a return flow, please, Mr. Toedter?

THE WITNESS: Okay. Well, I think as temporal in the sense that's it's a distribution and it's, oh, cyclical type pattern that we're talking about. Namely, usually the highest level of return flow being in the late portion of the irrigation season and the lowest portion being prior to the start.

THE SPECIAL MASTER: All right, what is the temporal return flow compared with? What is an antonymous situation to a temporal return flow? You know, you can have a high flyer and a low flyer in aviation, you have I.F.R. or V.F.R. condition, you have a temporal return flow as to what other kind of return flow is there?

THE WITNESS: Okay. Well, I don't think, you know, toedter-cross-white

	1 1998	 	
			you can make this sort of a comparison.
2	2		THE SPECIAL MASTER: Then why do we use the word
ξ	3		temporal?
	4		MR. WHITE: Your Honor, if I could ask a couple of
č	5		questions I might be able to clear it up.
ð	6		THE SPECIAL MASTER: Well, if you can put some light
7	7		on the subject matter, I would be grateful to you, Mr.
8	8		White. I just want to know what it means when it is used
ę	9		that way.
01	10	Q	(By Mr. White) Bob, let's say in April you divert ten
11			c.f.s. and I would like you to assume the following
12	12		fact: In April we divert ten c.f.s. during the month
1.3	13		and we apply it to a 20-acre tract, 40-acre tract, what-
M	14		ever let's call it a 40-acre tract.
15	15	A	Okay.
al	16	Q	And some of that water is lost out the ditch, some of
71	17		the water is consumed by the plants but some of the water
ता	18	 	is left over and some of the water that's left over is
er er	19		lost to deep percolation.
20	20	A	That's right.
21	21	Q	And some of it gets back to the stream.
25	22	A	Right.
	23	Q	It finds its way either on top of the ground or through
2	24		percolation, under the ground back to the stream, is
2	25	toed	ter-cross-white
			Frontier Reporting Service 18. WY 83001 Frontier Reporting Service 201 Midwest Building

(307) 635-8280

A second division of	<u> </u>	
. 1	1	that correct?
\$	2	A That's correct.
3	3	Q Now, the water that we divert during April doesn't get
	4	back to the stream during April does it?
i ē	5	A Not necessarily.
d	6	Q Some of it may get back during April, but the time it takes
7	7	to get from the place we diverted back to the stream is
3	8	stretched out so some will get back in April, some will
P	9	get back in May, some will get back in June, right?
91	10	A Okay. Let's point out this fact: I think the surface
	11	return flow in these modeling states is usually considered
12	12	to return within the month like April, for instance.
L3	13	THE SPECIAL MASTER: Is deep percolation and
11	14	THE WITNESS: Okay. Now, the deep percolation is
ſä.	15	going to take a longer period of time to take in return
ðl i	16	because it moves through the ground rather than across
17	17	the surface.
15	18	THE SPECIAL MASTER: That's the feeding of life to
91 	19	the river system that was referred to various times by
$\mathcal{L}_{\mathbf{a}}$	20	Mr. Kersich.
: ⊆	21	MR. WHITE: Well, that's deep percolation, Your
# 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	22	Honor, and then there is also just the return flow.
2	23	THE SPECIAL MASTER: For the alluvium.
2.1	24	MR. WHITE: Underground, but fairly shallow and it
\$	25	toedter-cross-white
مُستنفسين		Francisco Domontino Cometo -

	ìi	takes a long time. There is time distribution. The
		temporal distribution over a period of time.
	3	THE SPECIAL MASTER: A what distribution? .
	4	MR. WHITE: A temporal distribution over a period of
	5	months, before all the water that we diverted in April
	. 6	that's going to get back into the stream is going to
	7	get a certain percentage will get back in May, a
	8	certain percentage in June
	9	THE WITNESS: It is a like effect.
1	10	THE SPECIAL MASTER: I think I understand what you
	11	mean by temporal return flow, it is always within one
	12	irrigation season, you don't do it from one season to
	13	another.
-	14	THE WITNESS: No, we haven't.
	15	THE SPECIAL MASTER: When you're talking about return
	16	flow.
	17	MR. WHITE: It could be though.
	18	THE WITNESS: Yeah, the mathematics become very very
گسرنو م	19	complex.
	00	THE SPECIAL MASTER: Well, that's nothing new to this
المسرد		lawsuit.
	22	MR. WHITE: As long as we're here, Your Honor, let's
1	23	just keep going in this general line of questioning, Your
	24	Honor.
4	25	toedter-cross-white
.]	l:	Examples Country

	1	
1		THE SPECIAL MASTER: Okay.
2	Q	(By Mr. White) Bob, on your temporal return flows in
3		your depletion analysis, you had 9.2 percent returing
4		in June, as I recall, is that correct?
5	A	Okay, that's correct.
6	Q	And in your return flow analysis you had 14.8 percent
7		returning in June, is that correct?
8	A	Okay, that's correct.
9	Q	The difference between those two is the addition of
10		surface return flow, is that correct?
11	A	No, that's not correct.
12	Q	Okay, I misunderstood your previous testimony. Why then
13		do you have 9.2 percent in one study returning in June
14		and 14.8 percent in the other study returning in June?
15	A	Okay, the reason for this was just merely the way the
16		models were structured. We did the depletion work first,
17		and then the HEC-3 is the structured model in which we
18		had to develop some system within the program to account
19		for return flow. Consequently, it was necessary to
20		develop a technique in the HEC-3 to address this. By
21		merely combining both categories of return flow, both
22		your surface return flow and your groundwater return flow,
23		this was easily handled. Now, what I did in my depletion
24		analysis was the surface return flow is a direct proportion
25	toed	ter-cross-white

1		based on those efficiency relationships that I provided
2		in my previous testimony of the diversion. The volumetric
3		total was determined for the groundwater return flow in
4		the depletion study and then redistributed according to
5		the monthly percentages that I gave of which this 9.2
6		percent for June is one of them.
7	Q	So you included both groundwater and surface water return
8		flows in both studies?
9	A	Yes, both were included within both studies. However,
10		they were handled differently in each study. They were
11		combined in the systems operation study, they were
12		handles independently in the depletion study.
13	Q	In the depletion study where you had 9.2 percent in June,
14		was that both groundwater and surface water?
15	A	No, that was just groundwater.
16	Q	Okay, and in the return flow study when you had 14.8
17		percent in June, was that both groundwater and surface
18		water?
19	A	Yes.
20	Q	Okay, of the 14.8 percent in June in your return flow
21		study, what proportion of that is surface return flow
22		and what proportion is groundwater return flow?
23	A	Okay. Well, what I did was I, first off identified the
24		total and then I broke it back into a groundwater component,
25	toed	lter-cross-white

PRINTER TOURS OF THE PRINTERS OF THE PRINTERS

1		So by analyzing the thing, I found of the 14.8 percent
2		in June that about 3.9 percent or 3.9 of that 14.8 as
3		compared to 3.9 was groundwater.
4	Q	So you multiply 3.9 percent times 14.8 percent?
5	A	No.
6	Q	Or you subtract?
7	A	No. You could subtract them.
8	Q	Okay.
9	A	In other words, if you take a 14.8 percent would be
10		comprised of 3.9 percent plus
11	Q	The remainder?
12	A	The remainder, yeah.
13	Q	Can you give me those values begining in August for your
14		breakdown between or the percentage involving ground-
15		water?
16	A	Do you want my groundwater percentages
17	Q	Yeah.
18	A	or do you want
19	Ω	Yeah.
20	A	the difference?
21	Q	Oh, the difference well, you gave me 3.9 percent
22		attributable to groundwater.
23	A	Okay.
24	Q	For June. Can you give
25	to	edter-cross-white

*			
	1	A	The groundwater component
	2	Q	Can you give me a similar groundwater component beginning
	3		in October?
•	4	A	Okay. In October I used 4.2. In November it was 3.7,
	. 5		December 2.7, January 2.3, February 2.6, March 2.9,
	6		April 3.6, May 3.7, June 3.9, July 4.0, August 4.2 and
	7	<u> </u>	Septermber 4.3.
	8	Q	I want to make sure, July is 3.0 or 3.9?
	9	A	Excuse me, that would be 4.0.
	10	Q	Okay, 4.0. In August 4
	11	A	Two.
	12	Q	I'm sorry, could you just give me the June through
24	13		September?
	14		THE SPECIAL MASTER: Why don't you read them, please,
4	15		from the record. Read the answer from the record, please.

(The above portion of the (answer was read back by the (reporter as follows: "A. June (3.9, July 4.0, August 4.2 and (September 4.3."

MR. WHITE: Thank you, Lamont.

- (By Mr. White) Okay, Bob. Then in October in your depletion study, you had 9.9 percent?
- Λ. Yes.
- And that was ground water and in your return flow study, you had 4.2 percent?
- 0 | A. Yeah.
 - 0. And that was ground water?
 - A. Okay. What I did was I took these numbers, arrived at the total and then developed it so I would come out with a hundred percent. In other words, if you take the ground water distribution that I give you for the depletion study and add those numbers together, they would total a hundred percent, and all you have to do is just take the total of the numbers that I just previously gave you month by month. Take the monthly value and divide by the total, and you will arrive at the monthly percentages.
 - O. I understand they add up to a hundred percent. Why, during October in one study, do you have 9.9 percent, and in the other study, you have roughly half of it,

22

23

24

4.2 percent?

- Okay just, you know, the way that was handled in terms of accounting to keep track of this thing.

 Once I, you know, developed a proportion that would occur during a given month for ground water, and we are just going through the means that I used to get there, you take the proportion that would occur during the given month times the total volume that occurs during the irrigation season that goes to ground water, and that's the component that will return as ground water return flow for that given month.
- Q Okay. In October for your return flow study, you had the total percentage ground water and surface water of 6.9 percent, correct?
- A. Right.
- Now in order to determine the actual quantity of return flow surface and ground water return flow during October of, let's say, 1980, what would you multiply the 6.9 percent by? Now would you determine the actual volume of return flow?
- A. Okay. That goes back to the equation that I pointed out yesterday that return flow is equal to the total diversion, minus the overall efficiency, times the

toedter-cross-white

	<u> </u>	
1		diversion, minus the non-beneficial use.
2	Ω	That gives you the total amount of diversion, is that
3		correct, for an irrigation season?
4	Λ.	No, that gives me the total amount of return flow.
5	Ú	But for what month?
6		THE SPECIAL MASTER: Any month.
7		THE WITNESS: Well, first off, I need to know
8		THE SPECIAL MASTER: You told me when I asked
9		that question last night you do it by the month, but
10		you don't divide by twelve. You can do it by the month
11		or by the week or by the season, isn't that a consistent
12		formula?
13		THE WITNESS: Yeah, you don't divide it by twelve,
14		you take the total, and then you take the monthly distribu-
15		tion percentage and multiply that percentage times the
16		total amount to come up with
17		THE SPECIAL MASTER: I think we are back in the
18		same thickets we were laboring in yesterday afternoon,
19		but go ahead, Mr. White.
20	Ω	(By Mr. White) Let's assume you divide a hundred cfs
21		Let's make it acre-feet, so it's easier.
22		THE WITNESS: Okay.
23	Ç.	A hundred acre-feet during October of 1980, and the
24		overall efficiency is 50 percent, what's the return
25	toed	lter-cross-white
	11	

1	flow in acre-feet during October?			
2	A. Okay, so the way one would approach this, you go back			
3	to the original formula that I gave yesterday. The			
4	return flow is equivalent to a hundred, which is the			
5	diversion that you give me, times or minus 50 percent,			
6	times the hundred, minus two-tenths, which is a non-			
7	beneficial use level, times the hundred.			
8	O. So we're going to end up with 40 acre-feet for return			
9	flow?			
01	A. So you should end up with 30.			
11	Ů 30.5			
12	A. Acre-feet for return flow.			
13	Q. Okay.			
14	A. Okay, then for example, October, if you take 6.9 percent			
15	or .069 times the 30 acre-feet, that will give you the			
16	return flow.			
17	Q Okay, during October?			
18	(Witness nodding head affirmatively.			
19	Q Now, if we went through the same example for June of			
20	1981, you came out with 30 acre-feet of return flow,			
21	would the 6.9 percent of 30 apply to October of 1980?			
22	A. Yes, in the manner which this study was set up, you know,			
23	providing that for the rest of the irrigation season			
24	Well, I mean we made that basic assumption that each

- irrigation season will be patterned the same, and this
 is, you know, based on duties that we have been provided
 by the agricultural consultant.

 One of the return flow that is attributable to irrigation
 - Os So for the return flow that is attributable to irrigation during the 1981 irrigation season, 6.9 percent of that you have modeled as taking place last year, being return flow in October of last year, is that correct?
 - A. Well, no, it doesn't really work out that way. I mean it looks like it works out that way, but, you know, you have carried it forward from the previous year. But the thing is, when you use the same amount of diversion all the time, it doesn't make any difference when you set your time frame up.
 - Q I see, and so --
 - A. As long as it is structured.
- And you avoid the problem by using the same amount of diversion every year, is that right?
 - A. That's right.
 - But had there been different amounts of diversion from year to year, the result of your analysis would be to have return flows from diversions based in July of 1981 coming back into the stream in October of 1980, isn't that correct?
 - A. Oh, we would have had to have structured our program toedter-cross-white

differently.

Based on your experience in the water resources area, is it common to have the identical diversions year after year after year?

MR. CLEAR: Objection, Your Honor. Mr. Toedter did not testify on diversions on direct examination.

MR. WHITE: He's already opened up the area, Your Honor --

THE SPECIAL MASTER: I'll sustain the objection. If you have evidence to show that it is not then, it is your duty to put it on in your case.

MR. WHITE: Your Honor, I would make the following offer of proof:

If Mr. Toedter were allowed to answer the question which I have just asked and for which the objection has been sustained, he would testify that, based on his experience, including the experience with the Bureau of Reclamation, it is quite unusual to have identical diversions year after year after year in the situation such as has been modeled in this action and for which his return flow analysis was prepared.

Very well. THE SPECIAL MASTER:

Q	(By Mr. White) Directing your attention, Mr. Toedter,
	to Exhibit C-294 and specifically the return flow area
	bounded in yellow, collected at Node 29

- Yes.
- -- isn't it true that that return flow area indicates that return flow is being collected upstream rather than downstream?
- A I guess I don't understand your question because generally return flow is collected from the lands that are -- oh, I see what you're saying. Well, probably, the problem with this is rather than the location of my node having been placed here on the map it probably would have more appropriately been located at this point (indicating), between the orange and the yellow lines.

Now, one thing I might point out yet this point in the study is return flow, it wasn't of particular importance to us -- or to Mr. Billstein and his systems operation work and we didn't even consider this portion of the South Crowheart area as a result.

THE SPECIAL MASTER: Well, if you didn't consider that portion of the South Crowheart, why did you put Your tabulations in your programming a node station in it? into the computer certainly used some figures that you got on your return flow from that node station, didn't it?

toedter-cross-white

استريا

<u> ا</u>

المنسوي

تسري

THE WITNESS: Not for South Crowheart, but yeah, the program can figure -- show a figure, but essentially that could be ignored for the purposes of this study.

THE SPECIAL MASTER: Well, if that figure can be ignored for the purpose of this study, what is there to deter one from ignoring the entire study?

THE WITNESS: Well, no, you can't do that.

THE SPECIAL MASTER: What are you telling us about return flow that isn't known as a matter of history and in the history of irrigation in the Rocky Mountain West? What is your study telling me that I can't get out of a text book on depletions and return flows in arid lands comparable to that on the Reservation? Why do we have to have three weeks of hearings on this that couldn't have been done in one or two days in the scientific application of return flows?

THE WITNESS: Okay. Well, I think the thing though that one has to keep in mind and that is important to us, is there is certain areas particularly here in the Little Wind where return flows are a very important component of our water supply and has been in the past.

THE SPECIAL MASTER: How can they be such an important component in the Little Wind and 11 miles downstream you ignore them, as you!ve just testified?

toedter-cross-white

THE WITNESS: Because, okay, they are not important to the United States' claim as such. They are probably important to other people downstream.

THE SPECIAL MASTER: Downstream users?

THE WITNESS: But, you know, we weren't interested in that --

MR. ECHOHAWK: Your Honor, as you recall, when Mr. Billstein testified in this particular area that we are discussing now, he said that the reason his return flows were calculated in this manner, which is a somewhat strange configuration, is that it is a very small amount of acreage and that that was also where the Popo Agie comes in, where there is an abundance of water supply. It was merely done for accounting procedure in order to facilitate the study, and therefore, it goes to the comment it is not important in the study at this point for that particular node.

THE SPECIAL MASTER: Okay. Mr. White.

Q (By Mr. White) Mr. Toedter, are you indicating then that Node 29 was misplaced on the map and should be placed down by the orange boundary on Exhibit C-294?

MR. ECHOHAWK: Objection. I thought we had just cleared that point up and he said it is not placed, it is merely done for accounting. Mr. Billstein previously toedter-cross-white

Frontier Reporting Service

e 1	1		testified about that
641	2		MR. WHITE: Well, that's Counsel's testimony.
2	3		MR. ECHOHAWK: We're getting back to the game of
-	4		trying to change exhibits.
-	5		THE SPECIAL MASTER: I'm going to sustain the
64			
-	6		objection because this is a keg of worms we can be with
	7		all morning.
ایمین ایمین	8		MR. WHITE: Okay. Let me go on to the next one,
المسيط المسيط	9		Your Honor.
	10	 	THE SPECIAL MASTER: All right.
	11	Q	(By Mr. White) Mr. Toedter, the lines between the orange
أنسين	12		area and the green area from which return flows are
الجميع الذ	13		shown to be collected respectively at Node 39 and 36
المين المين		<u>.</u>	runs roughly down the river, doesn't it?
اعي	14	A	That's correct.
أعمينا	15		
54	16	Ω	Isn't it true that return flows from this area would come
المح	17		back into the river above Node 36, rather than being
54	18		collected all the way down here at Node 39?
اعے	19	A	Yes. The reason why we handled it in the manner that we
77	20		did, is again for accounting purposes within the HEC-3
	21		program. It would have made it very awkward to have
-4	22		accounted for it in a manner to have included this area
			(indicating), within that area there.
4	23		THE SPECIAL MASTER: It would have been awkward to
	24	+00	dter-cross-white

have included the area on both sides of the river, the northwest and southeast at the same point in your project? THE WITNESS: Yes, because it would have required --THE SPECIAL MASTER: In your model? THE WITNESS: Yes, because it would have required a separate determination of acreage for this area in here 6 (indicating). Again, it is an accounting thing and it gets back to the importance of the return flow. That quantity of return flow at a particular location here in 9 the study. 10 11 THE SPECIAL MASTER: Okay. 12 Q (By Mr. White) Mr. Toedter, yesterday afternoon we were 13 talking about the uniform application of your temporal 14 distribution return flows throughout your study area, 15 do you recall that general discussion? 16 Yes. Q And isn't it true that you indicated that if the study or the return flow areas were similar, it really was not 18 necessary to compute different temporal distributions, 19 that you could have 6.9 percent coming back in October 20 in all of the areas? 21 Yes. Α Isn't it true that the efficiencies in, let's say, the 23 blue area that culminate in Node 39, the overall 24 toedter-cross-white 25

	efficiencies
A	Yes.
Q	and the overall efficiencies in the red area, which
	includes the Dinwoody Bench area that collect in 24
A	Yes.
Q	are significantly different?
A	Yes, they are.
Q	It is roughly
A	Your volume of your return flow is significantly different
	too.
Q	Isn't it true that the overall efficiency in the North
	Crowheart Unit of which the blue area is a part, is
	roughly 50 percent?
A	Yes.
Q	And the overall efficiency in the Dinwoody Bench area is
	roughly 16 percent?
A	Yes.
A	
A	Yes.
A	Yes. Okay. But, it gets back to my original point that
A	Yes. Okay. But, it gets back to my original point that even though your temporal distribution stays the same,
A	Yes. Okay. But, it gets back to my original point that even though your temporal distribution stays the same, your volume is significantly different and because of the
A	Yes. Okay. But, it gets back to my original point that even though your temporal distribution stays the same, your volume is significantly different and because of the fact that when you take and multiply your distribution
A	Yes. Okay. But, it gets back to my original point that even though your temporal distribution stays the same, your volume is significantly different and because of the fact that when you take and multiply your distribution times your volume, if that even though that factor
	A Q A

1	Q	What affects the speed of return flow, how quickly the
2		return flow gets back to the stream?
3	A	Okay. Like I related to earlier this morning, the surface
4		return flow returns within the same month. Groundwater
5		return flow is dependent upon the permeablility of the
6		soils that you're dealing with.
7		Now, in most areas that we're dealing with here, once
8	i	they reach equilibrium they would have a reasonably high
9		water table. So, consequently you're going to be heavily
10		dependent upon either subsurface or natural drainage in
11		the area or fluctuating water table all the time. So
12		what you're going to have is you're going to have an
13		equilibrium situation where your water table is high in
14		the fall, and it drops to the spring and starts back up
15		again which gets back again to this distribution analysis
16		that I'm looking at.
17	Q	Well, isn't it true that the permeability in the Dinwoody
18		Bench area is illustrated by the 16 percent efficiency?
19	A	Yes.
20		
21		
22		* * * *
23		
24		
25	toe	dter-cross-white

11	
1	O. The overall efficiency is much greater than the
2	permeability in the North Crowheart area?
3	A. Yes.
4	THE SPECIAL MASTER: What does that tell us? What
5	does that tell us, Mr. Toedter?
6	THE WITNESS: Well, that would actually indicate
7	that if your permeability is higher, the travel of
8	water can go a lot greater distance through the
9	ground before it becomes problematic. In other words,
10	if I were to put let's say I had a high water table
11	situation in the North Crowheart area. In order to
12	maintain that water table, I would have to put in series
13	of drains in the ground at a much closer spacing than
14	what would be required in the Upper Wind Unit.
15	THE SPECIAL MASTER: Let's just back up just a
16	little bit. The 15 percent efficiency figure was on
17	Dinwoody
18	MR. White: Dinwoody Bench. 16.2 really, Your
19	Honor.
20	THE SPECIAL MASTER: 16.2 on Dinwoody Bench.
21	and that same efficiency figure for the west half of
22	the North Crowheart proposed was how much?
23	MR. WHITE: Roughly 50 percent, I believe,
24	Your Honor.
25	toedter-cross-white

THE SPECIAL MASTER:

1	THE WITNESS: my expertise in this particular
2	lawsuit.
3	THE SPECIAL MASTER: Well, okay. Mr. White.
4	MR. WHITE: Let me ask another question, Your
5	Honor.
6	Q (By Mr. White) Mr. Toedter, if you were asked as a
7	general matter as a consultant to a rancher who came
8	into your office in Billings, and he asked you whether
9	or not it was more efficient to irrigate lands for
10	which the overall efficiency was 50 percent, as opposed
11	to lands where the overall efficiency was 16 percent,
12	wouldn't you tell him that it is more efficient to irri-
13	gate the 50 percent lands rather than the 16 percent
14	lands?
15	MR. CLEAR: Objection, Your Honor. Outside the
16	scope of direct examination.
17	THE SPECIAL MASTER: I'm not so sure it is outside
18	the scope of direct examination, Mr. Clear, and if it
19	is, then I have committed the first offense, and not
20	Mr. White.
21	MR. CLEAR: Well, I feel
22	THE SPECIAL MASTER: One of these months, I have
23	to figure out what is practicably irrigable and what
24	isn't practicably irrigable, and that's going to be
25	toedter-cross-white

a lonely old time in my life, and I would like to know that I've got something to rely on in the opinion when I say I don't think an area that takes water at 16.2 percent efficiency ought to be given the same credence for a grant of a reserved water right that does have a proposed area at a 50 percent area.

MR. CLEAR: Yes, Your Honor, but the North Crowheart area is the --

THE SPECIAL MASTER: Is proposed.

MR. CLEAR: It is proposed, which involves sprinkler irrigation and a whole new canal system. The other area where you have the 16 percent efficiency is under an existing system. It's the efficiencies which the farmers out there are now getting.

THE SPECIAL MASTER: Right.

MR. CLEAR: The efficiencies will change your water duty. The proposed systems you have higher costs -- and now Mr. White is going to object to the higher costs on the new systems, so -- One of the reasons for the higher efficiencies is the proposed systems using new technology sprinkler systems and pumps and so on and so forth.

MR. WHITE: Well, Your Honor, I would love to be able to cross-examine Mr. Clear on this.

toedter-cross-white

Frontier Reporting

-	
1	If you're going to sustain the objection, I have
2	no further questions. I just want the issue to be
3	raised firmly in the Master's mind.
4	THE SPECIAL MASTER: What Mr. White is doing with
5	this is he's trying to help me out with my question.
6	I think I'm going to have to keep my own questions
7	in my own little mind until we get in some other witnesses.
8	MR. WHITE: We'll have witnesses to present to
9	address that point.
10	THE SPECIAL MASTER: That's what I'm going to have
11	to do.
12	MR. WHITE: I have no further questions.
13	THE SPECIAL MASTER: Okay. Thanks, Mr. Toedter,
13 14 15	for
15	Go ahead, Mr. White, if you have anything further.
16	MR. WHITE: I think that we didn't get a ruling on
16 17 18	the offer of SB-2, 3-A and 3-B, and I offered them,
18	and there was no objection, but I don't think we got
19	a ruling.
20	THE SPECIAL MASTER: Let's make sure that they are
21	in evidence.
22	MR. ECHOHAWK: I think they are in.
23	THE SPECIAL MASTER: I think they are in, Tom.
24	Where is the one page, RFT1?
25	MR. WHITE: And I would also offer for illustrative

1	purposes RFT1, Your Honor.
2	THE SPECIAL MASTER: Yeah. All right.
3	Mr. Clear, you have no objection to these,
4	I presume?
5	MR. CLEAR: No, Your Honor. I think we've already
6	No.
7	THE SPECIAL MASTER: There is admitted into evidence
8	at this time let's take them chronologically
9	MR. WHITE: I'm sorry, Your Honor, if they were
10	We just didn't pick them up
11	THE SPECIAL MASTER: SB-3-B and SB-3-A were
12	admitted yesterday, and the record will so show.
13	Today, let's admit into evidence at this time
14	plaintiff's WRIR RFT1 and Wyoming WRIR SB-2. That's
15	all.
16	(The instruments hereinbefore (identified as Exhibits WRIR
17	(RFT1 and WRIR SB-2 were (admitted into evidence.
18	
19	MR. CLEAR: Your Honor, we made the offer yesterday
20	of U. S. Exhibit WRIR C-294, and the ruling was withheld
21	until Mr. White finished his cross-examination.
22	THE SPECIAL MASTER: Yeah. It is admitted into
23	evidence also.
24	(The instrument hereinbefore (identified as Exhibit WRIR
25	(C-294 was admitted into evidence.

	1	MR. WHITE: Could I have an objection to that,
2	2	Your Honor?
	3	THE SPECIAL MASTER: Yes. Although you recognize
	4	you have been working with it for the last hour and
-	5	
		a half, but go ahead and make your objection.
	6	MR. WHITE: I want to ask the purpose of it, was
	7	it for illustrative purposes only?
	8	MR. CLEAR: It was for illustrative purposes.
	9	MR. WHITE: No objection.
-	10	THE SPECIAL MASTER: It was in order to keep from
-	11	confusing the return flow nodes on the other map and
	12	from marking up the other map. I brought that on.

THE SPECIAL MASTER: Do we have anything further?

MR. WHITE: I have one thing, Your Honor, and that is, I'm starting to get very uncomfortable about the idea of the short time we have to put on our case, and I'm -- while I haven't done a complete analysis, I know it would be very helpful if we could start our case when we start again in September, and I would like to ask the Court if it would be possible to provide that when the Tribes begin their case, which I assume will be Thursday or Friday of next week, they continue on even if we have to go into August a little bit and finish their case so we can begin in September. And at least --

THE SPECIAL MASTER: It is a fair enough inquiry. We had hoped that the Tribes may not need more than about one week in Court, Mr. Echohawk.

MR. ECHOHAWK: Your Honor, I think the Tribes have many more witnesses now than anybody had originally anticipated. They added a new -- maybe a little complex testimony now. So I think they are going to require some more time. But the thing I'm concerned about is running this case into August. It's going to cut into our time for depositions. We had been banking quite heavily on having that entire month off in order to conduct our discovery. And if we take it all up with

trial time, we're going to be in a real bind. THE SPECIAL MASTER: Let's begin next Thursday the 20th, with your case, if the United States rest MR. ECHOHAWK: Well, we have Mr. Vogel and the title information to put on. THE SPECIAL MASTER: That will be the 20th. MR. ECHOHAWK: That should be maybe Thursday, and I think we should finish Thursday. THE SPECIAL MASTER: I don't mean the 20th, I a week from today, the 17th. We've had some changes since this was put out I mean the 16th I beg your pardon. On the 16th begin your case. Are you now does the United States now rest case? MR. CLEAR: No, Your Honor. We have Mr. Vogel and the title information. THE SPECIAL MASTER: When do you propose to puthem on? MR. CLEAR: Next Thursday. THE SPECIAL MASTER: And will you have them concluded next Thursday? MR. CLEAR: We think so, Your Honor. MR. ECHOHAWK: We think there is a question we a title witness whether or not she will be available.

1	Thursday or Friday, so it may be Friday morning before
2	THE SPECIAL MASTER: Well, you ought to have
3	her in Thursday if at all possible.
4	MR. ECHOHAWK: I think she has a conflict in
5	schedules.
6	THE SPECIAL MASTER: So that you can begin on the
7	17th as we discussed.
8	MR. PERRY: We'll be ready on Friday, Your Honor.
9	THE SPECIAL MASTER: And that means that you will
10	have the entire week of July the 27th through the 31st.
11	MR. ECHOHAWK: There is just no anticipating how
12	long the Tribes' case is going to take.
13	MR. PERRY: It will depend in large measure on how
14	much cross-examination there will be.
15	THE SPECIAL MASTER: That's true. To some extent
16	you can control a little bit your own destiny on your
17	cross.
18	MR. WHITE: Not a great deal, Your Honor, because
19	the Tribes and the United States have cross during ours.
20	THE SPECIAL MASTER: Maybe I can help control that
21	by a close monitoring of the record and making sure
22	that nothing is approached that is already in the
23	record that would be redundant or repetitive.
24 25	We'll have the week of July 27th through the 31st
25	for the Indian case, or for the Tribes' case, and also

Ë,

MR. WHITE: My concern, Your Honor, is that the case in chief of the United States and the Tribes, it appears to have consumed, by the time it is done, roughly six months, off and on on hearings, and we've got roughly three months to put our case on.

THE SPECIAL MASTER: Yeah but, Mr. White, that doesn't add up to equity. The mathematics doesn't hold certain because, you see, I would say half of the time that they used, you used on cross-examination.

MR. WHITE: I would like to suggest the following order to the Court: that we have as much time in direct examination as did the Tribes and the United States in direct examination. Therefore, I won't take advantage of any lengthy cross-examination I took of them, and if I could have just the same amount of time, I can't imagine that I could complain about that.

THE SPECIAL MASTER: To get back to answer the question you first raised, can we have some time in August for a hearing, I personally would have no no objection to an August hearing, and would have been pleased to set a week or two of August, but it was adamant by all of you, in my opinion, August is a month for family and children and for school --

MR. ECHOHAWK: And for depositions.

THE SPECIAL MASTER: And before school, and we don't want any hearing, and all of you said so, so I'm going to stick with it.

MR. WHITE: That was before your December 18th cutoff.

THE SPECIAL MASTER: No. Well, the December 18th cutoff has been -- you know, we're six months beyond the first cutoff of which you proposed, which the case began, so let's stay with it and do what we can, and you are the master of your own time, Mr. White. You have control of your case.

MR. WHITE: I just want to have as much time as everybody else.

THE SPECIAL MASTER: You will have that.

MR. WHITE: That's all I'm asking.

THE SPECIAL MASTER: I'm sure you will have that.

MR. ECHOHAWK: Your Honor, could I, in regard to
the December 18th cutoff, I would just make this one
comment: I believe Mr. White has a point that the case
has been going on for quite some time, and we are suddenly
going to try to cram the rest of the case into just a
few months left. I think this case is of such important
nature to the people of Wyoming and the people of the
United States and especially the Indians that I hate to
see it suddenly get all crumpled up at the end, and

somebody get short-changed since this is a one-time effort. I think everyone should try to condense the time as much as possible, but look upon the importance of the situation and not have some arbitrary cutoff point, because the United States still, and the Tribes still, and the State still has rebuttal, once the State is done. And obviously, as many complex issues and areas that are concerned, that may, itself, take up a month or so.

THE SPECIAL MASTER: I could not agree more with what you're saying. I believe that I have given thought every day of this hearing to exactly what you said. This is a complicated lawsuit. It must require time for it. With the patience of Job we have exerted, I believe, patience I didn't know I was capable of in these proceedings.

But the point to the whole judicial establishment and process is that a determination and ending of disputes must be made, not their prolongation ad infinitum, and any case, a class action case, an anti-trust case, and right now this nation is beseiged with these long, drawn-out matters, this isn't the only one by any means, must be brought to -- come to an end. I'm not taking unfair advantage of anybody, I'm crimping and cramping everybody's time. I know you're concerned about this,

and I would suspect that the United States may be concerned about limitations on rebuttal. I know that Sandy is concerned, but I know that the case has to end. And this part of it isn't going to end the case.

What if Judge Joffe decides we're going to have to have some hearings on the permits? You will have a year on that. But this portion of the case has to end, and I believe it is scheduled now fairly and justly. I believe the State has more than adequate time, and that's how I'm ruling. That's how I'm ruling, and I believe you will have more than adequate time for your case. You can't have a case all that much different from what the guardians and your colleagues in this matter have presented over all these many months. Your experts have been worked with in concert. The minute you reconcile your differences in pleadings, you put on the supplemental material or additional material you have, qualifying material you have, but you can't claim a surprise. The facts have been gone into as to your futures, as to what the staff at IIKM says are BIA's and what aren't.

Am I thinking improperly there?

MR. ECHOHAWK: Well, Your Honor, they have -- as I understand it, they have quite a bit of adjustments to Dr. Mesghinna's work, plus --

THE SPECIAL MASTER: All right.

MR. PERRY: Your Honor, I think --

THE SPECIAL MASTER: Let's get into it. Let's get it done in an efficient, expeditious, fair and economical manner that will be a pride to all of us in this profession. That's what we can do, and we can do this in the time that we have allowed.

MR. ECHOHAWK: The concerns also that I think we've got to look at, if we're looking at just three months of hearings to complete essentially part of the Tribes' case, the State's case and all of the rebuttal, is that I know Mr. White's concerned about getting cut off even in his direct presentation. What goes hand in hand in that is the United States and the Tribes getting cut off in their cross-examination, and we have seen Mr. White have weeks at a time with Mr. Billstein in cross-examination, and I think we -- It is only fair that we are entitled to as much cross-examination as necessary.

THE SPECIAL MASTER: If the facts warrant it, it will be. If they do not, if the evidence does not warrant it, you won't be.

MR. ECHOHAWK: That's exactly my point, but that's why I don't think we need an arbitrary point

20

to cut off.

THE SPECIAL MASTER: Yesterday we said we would cross these bridges as we get to them. Let's continue to do that. I think that's all we need to do, gentlemen.

MR. WHITE: Your Honor, for the record, I think
I need to agree with what Mr. Echohawk said, because
simply, I told him off the record that I agreed with
him, and I would like to show on the record that I agree.

THE SPECIAL MASTER: Thank you, and I agree with all of you. I recognize the crunch that you are in, but I tell you that I'm convinced what I'm doing is in the right direction and is proper, and there is no way this lawsuit is going to end when my report is filed. God, I know that. That's -- the lawsuit just begins then. I can hear the great moans of appeals and petitions for rehearing, and there's no way this can be adjudicated peacefully -- there isn't, but it can be done judicially.

All right. Do you have anything else for this morning?

MR. WHITE: No, sir, I don't.

THE SPECIAL MASTER: All right. And we are going -we will adjourn now until next Thursday morning at 9:15.
These rooms are available.

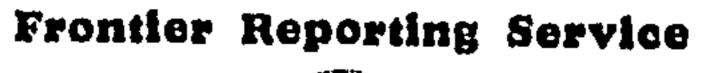

(Off-the-record discussion. (Proceedings recessed at about 10:10 a.m.
