	)	
SPOKANE TRIBE OF INDIANS,	)	MEMORANDUM AND ORDER
	)	GRANTING, IN PART,
Plaintiff-in-Intervention	)	MOTIONS TO AMEND
	)	MEMORANDUM OPINION
vs.	)	AND ORDER
	)	
BARBARA J. ANDERSON, et al.,	)	
	)	
Defendants	)	

I. NATURE OF THE CASE

This action, filed by the United States in 1972, seeks an adjudication of water rights in the Chamokane Stream System which is located in the northeastern portion of the State of Washington. The government acted on its own behalf and as trustee for the Spokane Tribe of Indians. The court permitted the Tribe to intervene as plaintiff. Defendants include the State of Washington (Department of Ecology and Department of Natural Resources), Dawn Mining Co., Boise Cascade, and all other persons who claim an interest in the water of Chamokane Creek, its tributaries or its ground water basin.<sup>1</sup> Jurisdiction lies in this court under 28 U.S.C. § 1345.

-----  
1  
In this memorandum, the term "Chamokane Basin" is used to refer to the entire system, including the creek, its tributaries, and its ground water basin.

32

The case was tried in two segments before the Hon. Marshall A. Neill in 1974 and 1978. On July 23, 1979, Judge Neill filed his Memorandum Opinion and Order (Ct. Rec. 189); judgment was entered September 12, 1979 (Ct. Rec. 196). Judge Neill died October 6, 1979.

Shortly thereafter, five of the parties filed motions to amend. There are two later motions to amend or supplement the judgment (Ct. Rec. 220, 227). Argument was heard before Magistrate Smithmoore P. Myers on February 29, 1980. All of the parties, pursuant to instructions of Magistrate Myers, submitted proposed changes in the Memorandum Opinion and Order and in the Judgment (Ct. Rec. 207, 209, 210, 211, 212 and 214) after which time oral argument was again heard. Magistrate Myers considered each of the proposals and submitted his Report and Recommendation on December 21, 1981 (Ct. Rec. 234, 235). Each party, except the United States has filed objections and moved to amend the Judgment (Ct. Rec. 237, 243, 244, 246, 248 and 249). The matter was then referred to this court for a final determination of the various motions. This court, by letter dated July 16, 1982, sought clarification from the parties as to their positions with regard to certain issues. The time for further response having passed, this court proceeds to address the issues before it.

## II. BACKGROUND

All parties to the litigation claim water in the Chamokane Creek area, either based upon Tribal reserved water rights or state appropriative rights, and the plaintiffs seek other relief in aid of their asserted water rights. The first section of this memorandum includes a description of the Chamokane Creek basin. Next, as in Judge Neill's memorandum, the parties' claims

MEMORANDUM AND ORDER GRANTING, IN PART,  
MOTIONS TO AMEND - 2

1 concerning water are discussed and determined in the following  
2 order: first, plaintiffs' claim to water, including the Indians'  
3 reserved water rights claims and the United States' water claim;  
4 second, defendants' claims to water pursuant to state law; and  
5 third, the plaintiffs' other requested relief, including request  
6 for permission to modify the judgment, and request to enjoin the  
7 state from exercising jurisdiction over water rights within the  
8 basin.

### 9 III. DISCUSSION

#### 10 PRELIMINARY CONSIDERATIONS

11 All motions are under Rules 52 and 59, Fed.R.Civ.P. These  
12 rules are not intended to provide a vehicle for reargument and  
13 rehearing. "A party who failed to prove his strongest case is  
14 not entitled to a second opportunity by moving to amend a finding  
15 of fact and a conclusion of law." 9 Wright & Miller, Federal  
16 Practice & Procedure, 722 (1971). Instead, they provide a means  
17 to amplify and expand the findings and judgment, and to correct  
18 manifest errors in fact or law. Consolidated Data Terminals v.  
19 Applied Digital Data Systems, 512 F. Supp. 581, 588 (N.D. Ca.  
20 1981); Davis v. Mathews, 450 F. Supp. 308, 318 (E.D. Ca. 1978).  
21 The burden of showing harmful error rests on the moving party,  
22 Purer & Co. v. Aktiebolaget Addo, 410 F.2d 871, 878 (9th Cir.  
23 1969), and a motion to amend invokes the sound discretion of the  
24 court. 11 Wright & Miller, supra at 32-33.

#### 25 THE CHAMOKANE CREEK BASIN

26 As stated in Judge Neill's findings, Chamokane Creek has a  
27 drainage area of 178 square miles. The headwaters of the creek  
28 lie in the Huckleberry Mountains north of the Spokane Indian  
29 Reservation. The creek flows eastward through the Camas Valley  
30

1 in what is known as the Upper Chamokane area, carrying runoff  
2 from the mountains and precipitation which finds its way into the  
3 surface flow. Near the town of Springdale, Washington, the creek  
4 turns southeastward. At the northern boundary of the Spokane  
5 Indian Reservation, the creek flows south and southwesterly  
6 through the Mid-Chamokane area (Walter's Prairie) to Chamokane  
7 Creek Falls. The creek flows continuously in the northernmost  
8 two-mile section of the Mid-Chamokane area, and then for the next  
9 five miles is intermittent and is dry during the summer. At the  
10 end of the five mile intermittent-flow area, just above Ford,  
11 Washington, and for the next three miles, massive springs with a  
12 regular flow throughout the year feed the creek which flows to  
13 the falls. The groundwater flow from the basin drainage system  
14 surfaces either at the springs or at the falls. The water then  
15 flows from the falls another 1.5 miles to the mouth of the creek,  
16 where it joins the Spokane River. The area between the falls and  
17 the mouth of the creek is known as the Lower Chamokane area.

18  
19 Judge Neill also found the creek and the groundwater system  
20 to be interrelated. Water enters the Chamokane Creek basin in  
21 the form of precipitation. In the Upper Chamokane area, the  
22 precipitation absorbed into the ground area becomes part of an  
23 underground reservoir unconnected to the Chamokane drainage  
24 system. The surface flow of the creek from the Upper Chamokane  
25 area which reaches the Mid-Chamokane region does become part of  
26 the Chamokane system, either by entering the basin groundwater  
27 system as recharge or by remaining as surface flow and exiting  
28 over the falls, usually as spring floods. Precipitation falling  
29  
30  
31  
32

MEMORANDUM AND ORDER GRANTING, IN PART,  
MOTIONS TO AMEND - 4

1 on the Mid-Chamokane region which is not lost by evaporation or  
2 evapotranspiration also becomes part of the groundwater system or  
3 flows over the falls as spring surface runoff.

4 The recharge to the basin aquifer, which comes from pre-  
5 cipation, varies from year to year. Groundwater withdrawals in  
6 the Upper Chamokane region have no impact upon the creek flow  
7 below the falls because groundwater in this area is part of a  
8 separate aquifer. Groundwater withdrawals in the Mid-Chamokane  
9 area, however, eventually do reduce the lower creek flow. This  
10 flow reduction occurs less immediately when the water removal  
11 occurs a greater distance upstream from the falls. Although the  
12 effect of groundwater removal near the springs sometimes is  
13 immediate, the effect of groundwater removal near the northern  
14 boundary of the reservation can be delayed up to two years.

15  
16 THE PLAINTIFF TRIBES' CLAIMS TO WATER

17 A. The Nature of the Indians' Reserve Water Rights:

18 When the United States has set aside a reservation of land,  
19 it impliedly reserves water then unappropriated in sufficient  
20 quantity to accomplish the purposes of the federal reservation.  
21 United States v. New Mexico, 438 U.S. 696, 698-700(1978); Winters  
22 v. United States, 207 U.S. 564, 577 (1908). "[T]he reservation  
23 is implied, rather than express . . . because of the history of  
24 congressional intent in the field of federal-state jurisdiction  
25 with respect to water". United States v. New Mexico, 438 U.S. at  
26 701-02. Indian tribes hold reserved water rights under the  
27 Winters doctrine. Winters v. United States, 207 U.S. at 564.

28 The Winter's doctrine is antithetical to the prior ap-  
29 propriation systems utilized throughout the western states. Under  
30 state law, appropriative rights ripen through actual diversion of  
31

32  
MEMORANDUM AND ORDER GRANTING, IN PART,  
MOTIONS TO AMEND - 5

1 and continued beneficial use of waters from their natural  
2 channels. Since these rights are not appurtenant to the land  
3 they can be filed separately. They are, however, subject to loss  
4 through non-use. Priority relates back to the specific date and  
5 hour of appropriation. There is no proration. Therefore, in  
6 times of shortage, the prior appropriator's rights are filled  
7 before junior holders are permitted to take water. See United  
8 States v. Big Bend Transit Co., 42 F. Supp. 459 (E.D. WA 1941).

9  
10 In contrast to appropriative rights created under state law,  
11 Indian Winters rights implicitly reserve to the Tribe a paramount  
12 right to the use of as much water which comes in contact with  
13 their reservations as is needed to fulfill the primary purposes  
14 for which the land was reserved. Colville Confederated Tribes v.  
15 Walton, 647 F.2d 42 (9th Cir. 1981) cert. denied, \_\_\_\_\_ U.S. \_\_\_\_\_,  
16 ( ). This is so regardless of whether the water was  
17 actually used at the time of the creation of the Reservation, and  
18 priority of rights relates back to the date of formation.  
19 Accordingly, actual diversion and beneficial use does not create  
20 the Tribe's reserved right and disuse does not destroy it. In  
21 other words, Winters rights are subject only to private appro-  
22 priative rights which have vested prior to the establishment of  
23 the reservation, and which have not been subsequently lost  
24 through abandonment or non-use. See Arizona v. California, 373  
25 U.S. 546 (1963); United States v. Ahtanum Irrigation District,  
26 236 F.2d 321 (9th Cir. 1956), cert. denied, 352 U.S. 988 (1957).

27 1. Reserved Water Rights for the Fishery.

28 The plaintiffs correctly claim that one of the purposes for  
29 creating the Spokane Indian Reservation was to insure the Spokane  
30 Indians access to fishing areas and to fish for food. See, Ct.

31  
32 MEMORANDUM AND ORDER GRANTING, IN PART,  
MOTIONS TO AMEND - 6

1 Rec. 189, at 9. Therefore, under the Winters doctrine the Tribe  
2 has the reserved right to sufficient water to preserve fishing in  
3 the Chamokane Creek. See, e.g., United States v. Winans, 198  
4 U.S. 371 (1905). The quantity of water needed to carry out the  
5 reserved fishing purposes is related to water temperature rather  
6 than to simply minimum flow. Ct. Rec. 189, at 10. The volume of  
7 water needed to preserve fishing in the creek below Chamokane  
8 Falls, was a furiously disputed issue at trial. Judge Neill held  
9 that the flow from the Falls into Lower Chamokane Creek must be  
10 sufficient to maintain the water temperature at 68°F or below,  
11 and in any event, at least 20 C.F.S. The Tribe has moved to  
12 amend this finding contending that current evidence shows the 20  
13 C.F.S. flow is inadequate to maintain the required temperature,  
14 and that the minimum flow should be 30 C.F.S. Ct. Rec. 237 at  
15 1-2. Magistrate Myers recommended that no changes be made  
16 regarding allocation of water to preserve the Chamokane Fish-  
17 eries, and this court agrees with the recommendation. It is  
18 clear that a flow of 20 C.F.S. would not always maintain the  
19 water temperature at 68° or below. A flow of 30 C.F.S., on the  
20 other hand, will not always be required to keep the water  
21 temperature at that point. Thus, if the appointed Water Master  
22 finds, as a result of his experience, that a higher flow is  
23 necessary at any time to accomplish the purpose, he is empowered  
24 to make the adjustment. If, however, over a period of time, flow  
25 and temperature records demonstrate that 20 C.F.S. flow is not  
26 realistically related to the maintenance of water temperature at  
27 68° or below, the judgment is subject to modification. There-  
28 fore, Judge Neill's factual determination and allocation of water  
29 for the Chamokane Fisheries should not be disturbed.  
30

31  
32 MEMORANDUM AND ORDER GRANTING, IN PART,  
MOTIONS TO AMEND - 7

1                   2. Recharge Storage Capacity of the Aquifer.

2                   The Tribe has moved the court to amend Judge Neill's  
3 findings regarding the Chamokane drainage system. See Ct. Rec.  
4 193. The Tribe agrees with the finding that the average output  
5 of the Chamokane drainage system is 35,000 acfe-feet per year.  
6 The Tribe requests that the finding additionally reflect that the  
7 average of 16,000 acre-feet are lost in the annual runoff, and  
8 that the recharge storage capacity of the aquifer is approx-  
9 imately 19,000 acre-feet, with an annual flow out of the springs  
10 of about 21,000 acre-feet. Magistrate Myers concluded that  
11 adding these additional findings to the amended memorandum and  
12 judgment is appropriate. This court agrees since the addition  
13 merely supplements and does not contradict the original finding.  
14 Accordingly, the Tribe's motion is GRANTED.

15                   3. Fish Hatchery.

16                   The Tribe further moves that Judge Neill's Opinion at p. 11  
17 be amended to show that the hatchery which is awarded 10 C.F.S.  
18 for non-consumptive use is on the Reservation rather than off of  
19 it. Ct. Rec. 198, at 2-3. This is factually accurate according  
20 to the record, and there has been no opposition to the proposed  
21 correction, as demonstrated by the responses to this court's  
22 letter to counsel. Magistrate Myers recommended that the  
23 Memorandum Opinion be corrected to show that the hatchery is on  
24 the Reservation. This court agrees the use of the term "off" was  
25 apparently inadvertent, and therefore, the Tribe's motion for  
26 correction is GRANTED.

4. Clarifying Clause.

Lines 2, 3 and 4 on p. 12 of the original Opinion reads, "plaintiffs do not challenge the state's jurisdiction to issue water permits for uses outside the Reservation". The Tribe has moved the court to amend this sentence by adding the following clause: "except to the extent that such pertain to waters which are part of the Chamokane Creek basin". Ct. Rec. 198, at 3. This court rejects the Tribe's latter request as unnecessary. As stated earlier, motions to amend are not permitted for the purposes of refashioning argument after disclosure of the court's reasoning, and the movant has not pointed to any portion of the record to justify the addition of this somewhat ambiguous and possibly far-reaching addendum. Consequently, the motion is DENIED.

B. The United States' Water Claim:

The United States, through its Bureau of Reclamation, Department of Interior, claims a right to the non-consumptive use of 10 C.F.S. of the flow of Spring Creek, a tributary of Chamokane Creek for fish propagation. This water use was authorized by the State of Washington through Surface Water Certificate No. 2831. The authorization is for the use of water outside exterior boundaries of the Indian Reservation, and none of the parties have challenged the validity of the state's certificate. Judge Neill held the United States has a valid right to water as authorized in this certificate.

Motions filed by the United States, then, essentially support and approve those filed by the Tribe. Ct. Rec. 201 and 209. The motions of the United States and the Tribe will

1 therefore be considered together, although it is noted that the  
2 United States did not object to the Magistrate's Report and  
3 Recommendation. Ct. Rec. 249.

4 C. Claims Asserted by the State of Washington:

5 1. State Water Code.

6 The State of Washington Department of Ecology has filed a  
7 motion to reconsider and modify Judge Neill's Opinion based upon  
8 two general criticisms of the judge's interpretation of the  
9 state's water code. Ct. Rec. 202. First, the Department asserts  
10 that claims prior the State's 1970 Water Code have been omitted  
11 from the decision. Id. at 2. See also, Ct. Rec. 248. Judge  
12 Neill's findings concerning the defendants' recognized water  
13 rights are listed in a chart in the decision. See Ct. Rec. 189  
14 at 13-14. The judge emphasized in his decision that the rejected  
15 claims were omitted from the listing. Clearly, this was an  
16 intentional act on the judge's part based upon his analysis of  
17 all of the evidence and his review of the law. Therefore, the  
18 defendant's contention is a reargument of its trial position in  
19 an area where there are no manifest errors of fact or of law.  
20 Hence, this court agrees with Magistrate Myers' recommendation  
21 that no change be made in this area, and defendant's motion is  
22 DENIED. The Department of Ecology further argues the trial court  
23 opinion erroneously confirmed some form of inchoate water rights  
24 to individual claimants based only upon applications for state  
25 permits. Ct. Rec. 202 at 2-3; Ct. Rec. 249; Ct. rec. 189 at  
26 14. Magistrate Myers concluded that the defendants' position is  
27 essentially a reargument of its contentions at trial. This court  
28 agrees, and may therefore not disturb the findings in the trial  
29 judge's opinion. The defendant's Motion is DENIED.

31  
32

2. Water Master.

The Department of Ecology further moves the court to modify Judge Neill's Judgment, sections 12 through 14, to provide that the state make the selection of the Water Master. Ct. Rec. 202 at 3. The Department contends the McCarran Amendment, 43 U.S.C. § 666 (1976), contemplates that only state water code administrators may administer federal reserved rights. Id. This court disagrees with the movant's interpretation of the McCarran Amendment. The motion is DENIED.

As directed in Judge Neill's Memorandum and Order, the parties conferred in an effort to agree upon the individual to be appointed Water Master. They were unable to agree and have made nominations. The Magistrate, in a separate Report & Recommendation, recommended the appointment of Ira D. Woodward as Water Master. The recommendation of the Magistrate is accepted and Ira D. Woodward is hereby appointed Water Master of Chamokane Basin, to serve at the pleasure of the court, and under the terms of Judge Neill's Order of July 23, 1979, as herein amended.

3. Change in Use.

Judge Neill determined that the Tribe holds reserved water rights under the Winters doctrine for irrigation of crops. These waters were impliedly reserved at the creation of the Spokane Reservation. Ct. Rec. 189 at 5 and 9. The Tribe now desires to transfer water used for irrigation to the preservation of the fishery in the lower Chamokane area. The State Department of Ecology has objected to the Tribes' claim to water for a fishery. Ct. Rec. 202 at 5. See also, Ct. Rec. 248. The Department argues that a reserved water right is limited to only the primary purposes for which a Reservation is created. Although this

1 contention is correct, there is no reason to disturb Judge  
2 Neill's appropriate conclusion that maintenance of the creek for  
3 fishing was a purpose for creating the Reservation. Ct. Rec. 189  
4 at 9. Thus, the Tribe has the right to sufficient water to  
5 maintain the fishery. It is settled law that when a Tribe has a  
6 vested property right in reserved water, it may use it in any  
7 lawful manner. Colville Confederated Tribes v. Walton, 647 F.2d  
8 42 (9th Cir. 1981) cert.denied, U.S. 102 S.Ct. 657  
9 ( ). Therefore, it is permissible for the Tribe to transfer  
10 its use of water for irrigation (a primary use) to the Tribe's  
11 fishery (also a primary use) if the Tribe wants to enhance its  
12 allotment of water to the fishery. Magistrate Myers concluded  
13 that the Department of Ecology's position should be rejected, Ct.  
14 Rec. 235, at 8, and for the reasons stated, this court agrees.  
15 (The State of Washington Department of Natural Resources also  
16 contends that the right to change use is contrary to law and  
17 evidence. Ct. Rec. 200 at 2). See also Ct. Rec. 246. The  
18 Department of Ecology's Motion is DENIED.

19  
20 4. Replacement Fishing Grounds.

21 The State Department of Ecology (Ct. Rec. 202, at 5-6; Ct.  
22 Rec. 248) and the State Department of Natural Resources (Ct. Rec.  
23 200, at 2; Ct. Rec. 190, at 2) argue that since the Tribe's  
24 historic fishing grounds were destroyed by the construction of  
25 dams on the Columbia River, their right to water flows for  
26 fisheries no longer exist. The Ninth Circuit in Walton, supra  
27 emphasized that changed circumstances do not abrogate the Tribe's  
28 right to reserved water for fishing. (That court found an  
29 implied reserved water right for replacement fishing grounds). It  
30 therefore follows, that the implied reservation applies as well  
31

1 to the situation here (maintenance of trout in the lower Chamokane)  
2 as to that in Walton. Magistrate Myers concluded that no  
3 change should be made in Judge Neill's Opinion in this respect.  
4 Ct. Rec. 235 at 8. This court agrees; the defendants' Motion to  
5 Modify the Opinion and Judgment is DENIED.

6  
7 5. Miscellaneous Modifications.

8 The Department of Ecology has moved to modify under what it  
9 entitles a miscellaneous category. Ct. Rec. 202 at 10-13. The  
10 Department objects to the inclusion in Section 10 of the Judgment  
11 (Ct. Rec. 198 at 6) claiming that the provision for modification  
12 of the Judgment "upon a showing of substantial change in circum-  
13 stances" results in a greater need for water by the Tribe. It  
14 further wants plaintiffs specifically included in Section 22 (Id.  
15 at 10) which enjoins defendants from asserting rights beyond  
16 those in the judgment, or from taking Chamokane Creek waters so  
17 as to interfere with the prior rights of others. (Ct. Rec. 202  
18 at 12). Magistrate Myers concluded that since the Tribe has a  
19 prior reserved right to all or practically all of the waters of  
20 Chamokane Creek, and that any use of the waters by defendant is  
21 in strict subordination to those prior rights, there seems to be  
22 no reason or necessity for the modification sought by the  
23 Department of Ecology. This court agrees that there is no need  
24 to modify Section 22 of Judge Neill's Judgment. Regarding the  
25 Department's objection to the Tribe's right to modify the  
26 judgment, Section 10, the law is clear the Tribe has a right to  
27 reserved water for present as well as future needs. Arizona v.  
28 California, 373 U.S. 546, 600 (1963). This court is also aware  
29 that open-ended water rights create uncertainty and conflict in  
30 western water law, Colville Confederated Tribes v. Walton, 647

1 F.2d 42, 48 (9th Cir. 1981), \_\_\_\_\_ U.S. \_\_\_\_\_, 102 S. Ct. 657 ( )  
2 and general adjudications are designed to close the open-  
3 endedness of all varieties of federal and state claims. While  
4 the Department argues that Section 10 as written appears to allow  
5 the Tribe to reopen the case for the purpose of allowing them to  
6 apply for a future non-reserved purpose, the Department's  
7 argument is misplaced. As discussed earlier, tribes only have  
8 reserved waters based upon the primary purposes for creating the  
9 reservation, and these quantified reserved rights may be used in  
10 any lawful manner. Therefore, retention of jurisdiction for  
11 future modification is appropriate for reserved rights based on  
12 primary purposes, and it would be inappropriate to alter the  
13 judgment. The Department's Motion is DENIED.

14  
15 6. Irrigable Acreage.

16 The state asserted at trial that the Tribe could not claim  
17 reserved water for acreage which was classified as timber or  
18 grazing land under the Act of May 29, 1908, Ch. 217, 35 Stat.  
19 458. See Ct. Rec. 189, at 6-8. Judge Neill rejected this  
20 argument, finding that Indians should be allowed to benefit from  
21 modern technology which permits irrigation of land formerly not  
22 practicably irrigable. Id. at 6, citing United States v.  
23 Winters, supra, and Arizona v. California, supra. The Department  
24 of Ecology (Ct. Rec. 202, at 6-7 and Ct. Rec. 248) and the  
25 Department of Natural Resources (Ct. Rec. 200, at 2. See also  
26 Ct. Rec. 246 at 5) have filed motions to reconsider the issue.  
27 Magistrate Myers reasons that both defendants are basically  
28 trying to reassert and reargue their positions advanced during  
29 trial and concludes there were no omissions and no manifest  
30 errors in law or in fact. Ct. Rec. 235 at 6. This court agrees.

1 The record reflects careful consideration of the issues. Since  
2 there are no manifest errors in law or in fact, reopening  
3 consideration of this issue runs counter to the purposes of Rule  
4 52 and Rule 59 motions. Therefore, the Motions of the Washington  
5 State Department of Ecology and the Washington State Department  
6 of Natural Resources for reconsideration are DENIED.

7 7. Department of Natural Resources Water Claims

8 The Department of Natural Resources has moved the court to  
9 "reconsider" and "modify" the Memorandum Opinion claiming the  
10 court failed to recognize its rights to water within the Chamokane  
11 Basin. Ct. Rec. 190 and Ct. Rec. 200. In the Memorandum  
12 Opinion, the claims of the Department of Natural Resources were  
13 not found to be "perfected" under state law. Ct. Rec. 189 at 12.  
14 Therefore, the Department's water claims were omitted from the  
15 chart listing recognized water rights in Chamokane Creek. See  
16 Ct. Rec. 189 at 13 and 14. Judge Neill generally held, however,  
17 that "[w]ater for domestic use is not included within the  
18 judgment, as it is de minimus and should always be available."  
19 Ct. rec. 189 at 16.

20 Since issuance of the Magistrate's Report and Recommendation,  
21 the state has attempted to clarify its somewhat unclear  
22 position with respect to its asserted de minimus riparian right  
23 to water for domestic and stock purposes. Ct. Rec. 246 at 1-5.  
24 Specifically, the state reasons that perfection of a valid  
25 riparian right to water for domestic and stock purposes does not  
26 require obtaining a state permit. It is further argued the  
27 undisputed evidence shows that domestic and stock water uses  
28 began in the early 1900's and have continued since that time. Id.  
29 at 3. Moreover, the state maintains the trial court's de minimus  
30

1 ruling, quoted above, "was a result of an analysis of the  
2 evidence wherein the plaintiff's testimony was that stock water  
3 and domestic uses were de minimus uses and did not affect the  
4 flow of Chamokane Creek." Emphasis added. Consequently, it is  
5 argued the part of the Opinion finding no perfection and the part  
6 ruling upon de minimus use are inconsistent. Since no opposition  
7 has been voiced, the state would have this court either perfect  
8 the state's water rights or issue an alternative ruling that  
9 stock water and domestic uses are not being adjudicated and  
10 delete the reference to failure to perfect. Ct. Rec. 246 at 3  
11 and 4. The state resists any additional, explanatory language to  
12 the effect that there should be no substantial increase in stock  
13 numbers. Such qualifier should not be included, it is argued,  
14 because (Judge Neill did not qualify his de minimus ruling and)  
15 such language would be "misleading" and "ambiguous". Id. at 4.  
16 The further contention is that the evidence in this action was  
17 that normal stock water grazing related to the carrying capacity  
18 of the land is de minimus.

19  
20 On July 16, 1982, this court wrote to all counsel asking  
21 whether any parties other than the state (or Boise Cascade,  
22 infra) had taken a contrary or other position with respect to  
23 this riparian right issue. No party has indicated a contrary  
24 position. Hence, this court is left with the following pro-  
25 position: The undisputed evidence is that normal stock water use  
26 (grazing related to the carrying capacity of the land) and  
27 domestic water use is de minimus and does not include impound-  
28 ments. The Memorandum Opinion is therefore adjusted to reflect  
29 that these uses are not included in the judgment and should  
30 always be available. The reference to the failure of the state  
31

1 to perfect, insofar as such reference pertains to these de  
2 minimus uses, then, is deleted. These changes are meant to  
3 merely amplify the findings so as to avoid possible differing  
4 interpretations from arguably inconsistent opinion language. To  
5 this extent only, the Motion is GRANTED.  
6

7 Finally, the Department of Natural Resources argues that  
8 since their water usage is de minimus and does not affect the  
9 flow of Chamokane Creek, it should not have to pay for the Water  
10 Master. Ct. Rec. 246 at 5 and 6. Again, no objections to this  
11 seemingly appropriate arrangement have been raised. Since usage  
12 is de minimus (and so long as it remains so), the Department's  
13 Motion is GRANTED.

14 D. CLAIMS ASSERTED BY DAWN MINING COMPANY

15 Dawn Mining Company owns three (3) parcels of land, one on  
16 the Reservation and two adjacent. It operates a plant for  
17 processing uranium ore from the Reservation. Judge Neill's  
18 Judgment recognized a water right in Dawn for 1 C.F.S. with a  
19 priority date of August 1, 1956. Ct. Rec. 189, at 13.

20 On March 13, 1974, a stipulation was filed in this case  
21 between the Tribe and Dawn. Ct. Rec. 114. The Tribe agreed that  
22 regardless of the outcome of the litigation, it would permit Dawn  
23 to divert 1 C.F.S. from the water decree belonging to the Tribe  
24 so long as Dawn operated the mill and used the water in that  
25 operation. This stipulation essentially confirmed the state-  
26 awarded 1 C.F.S. right referred to above. Since the water would  
27 come from the Indians' share, there would in effect be a higher  
28 priority and Dawn would have greater assurance of receiving the  
29 water at all times.

In addition, the agreement provided that Dawn would be entitled to 1 C.F.S. from the Tribe's share for domestic consumption, including stock water and irrigation. This part of the agreement was to be effective without reference to the operation of the mill. There was no mention of this stipulation in the court's Opinion or in the Judgment filed September 12, 1979. On June 23, 1980, Dawn filed its proposed changes in the Opinion and the Judgment. Ct. Rec. 211. On November 25, 1980, Dawn filed its formal Motion to Correct the Judgment and Findings. It relied on Fed.R.Civ.P. 60 permitting the court, on its own initiative or the motion of a party, to correct errors arising from oversight or omission.

On January 9, 1981, Dawn filed an Alternative Motion for Supplemental Judgment Approving the Stipulation. Ct. Rec. 227. In this motion, Dawn sought an Order and Decree that the stipulation is binding upon the signers. The motions were argued on January 26, 1981 before Magistrate Myers. The three signatories to the 1974 stipulation agreed to the entry of a Supplemental Judgment, the effect of which would be restricted to them. The Department of Ecology objected on the merits to "off Reservation, non-Indian" use of reserved Indian waters.

Magistrate Myers concluded that it was by an inadvertent oversight that Judge Neill did not address this issue in his Opinion and in the Judgment. Therefore, it was proper under Rule 60 for the court to consider the issue. Ct. Rec. 235, at 11. This court agrees.

Based upon this premise Magistrate Myers considered the legal effect of the stipulation and its grant of water to Dawn for the ore plant and for irrigation and stock water purposes. It

1 was decided that water was necessary for the operation of the  
2 Dawn ore plant which processed ores from the Indian Reservation  
3 and that the activities of Dawn were of real benefit to the  
4 Tribe. Thus, even though such a use would not have been con-  
5 templated when the Reservation was established, the use of Tribal  
6 reserved water in this manner, is not and should not be so  
7 limited. Ct. Rec. 235, at 12. Magistrate Myers recommended that  
8 the court enter a Supplemental Judgment as agreed by the signers  
9 in the 1974 Stipulation affirming the transfer of 1 C.F.S. of  
10 water from the Tribe to Dawn, as a proper use of the water and  
11 providing that the terms of the Stipulation in this respect are  
12 binding among the three signatories. Id. This court agrees. A  
13 supplemental judgment shall include 1 C.F.S. of water for the  
14 operation of the ore plant.

15  
16 As to that part of the Stipulation which grants to Dawn 1  
17 C.F.S. of water for irrigation and stock water purposes, the  
18 conclusion in the Report & Recommendation is the attempted  
19 transfer is unlawful, Ct. Rec. 235 at 12, based upon the fol-  
20 lowing observations: (1) that the transfer of water to Dawn was  
21 of no direct benefit to the Tribe; (2) that, via the Stipu-  
22 lation, a non-Indian off-reservation user, who had not qualified  
23 under state law for the diversion, was moved up to a position of  
24 priority equal to that of the Tribe; (3) and that under this  
25 theory, the Tribe could give or sell all its reserved water to  
26 any off-Reservation commercial user. Id.

27 Since the filing of the Report & Recommendation, Dawn Mining  
28 has further argued in support of this second part of the stipu-  
29 lation that the parties should be permitted to stipulate rather  
30 than litigate. Dawn further challenges the Department of  
31

1 Ecology's standing to object to the stipulation. The Department  
2 has not asked to respond to these latter contentions, nor did it  
3 address this issue in its letter of response to the court's July  
4 16, 1982, letter of inquiry. Consequently, its objection to the  
5 stipulation is now deemed abandoned. Also, no other party  
6 opposes the stipulation.

7 This court agrees that taking this second part of the  
8 stipulation to a possible logical extension would conceivably  
9 permit a Tribe to sell all of its reserved water to any off-  
10 Reservation commercial user. However, such is not the argument  
11 which is presently before the court. In addition, there is the  
12 added safeguard of involvement by the United States which has  
13 approved the present sale of de minimus amounts of water. No one  
14 raises a question of whether appropriate government consent  
15 procedures, if necessary, have not been followed. See Cohen,  
16 Handbook of Federal Indian Law, 1982 Ed. at 593.

17 As discussed earlier, Professor Cohen has reasoned that  
18 "[s]o long as other water users are no worse off than they would  
19 have been if the rights had been exercised for their original use  
20 at the original place, Indians and Indian Tribes presumably  
21 [should] be allowed to change the nature and place of use of  
22 their reserved rights in order to further the purposes of their  
23 reservations and to advance their economic self-sufficiency."  
24 Id. at 592. The Dawn stipulation does not present the "logical  
25 extension" scenario of a potential investor with plans to use  
26 large amounts of "conveyed" reserved water. See Cohen, supra. The  
27 consent of the United States adds additional protections.  
28 Accordingly, this court finds part two of the stipulation to be  
29 lawful.

E. CLAIMS OF BOISE CASCADE

1. Water for Stock, Timber, Road Maintenance and Fire Protection

Boise Cascade filed a Proposed Revision of the Court's Memorandum and Judgment. Ct. Rec. 212. See, Ct. Rec. 199. Boise Cascade argues that their right to water for stock, timber, road maintenance, dust control, and fire protection was erroneously omitted from the original Memorandum Opinion. Id., at 4-5. At the February 29, 1980 hearing before Magistrate Myers, the Tribe agreed that they have no objection to use of Chamokane water for these purposes as long as it is not quantified or impounded and as long as the stock is not substantially increased in numbers. In his Report & Recommendation, Magistrate Myers ruled that the use of water by Boise Cascade is de minimus, and without affect on the flow in the Lower Chamokane. The Magistrate concluded that the Opinion and Judgment be amended to show:

(a) That water for domestic use and for stock is de minimus and not included within the Judgment, and that so long as the water is not impounded and so long as there is no substantial increase in stock numbers Boise Cascade has a right to water for these purposes.

(b) That Boise Cascade may use water for dust control, road maintenance and fire protection, as long as it remains de minimus or is with the consent of the Tribe.

1 (c) The Tribe may apply to the court for  
2 protection at any time if use of Chamokane  
3 water for the purposes set forth in the two  
4 preceeding sections appears not to be de  
5 minimus, or in any other way violates the  
6 Opinion and Judgment.

7 (d) Boise Cascade's Alternative Motion for a  
8 New Trial should be denied as the grounds  
9 alleged do not justify a new trial.

10 This court agrees and the Opinion and Judgment shall be so  
11 amended. If increases in "numbers" of stock result in a use  
12 which is more than de minimus, the Tribe may apply to the court  
13 for protection.

14 2. Payment of the Water Master

15 The Tribe and Boise Cascade agree that it is impossible to  
16 adequately measure the de minimus use of Chamokane water by Boise  
17 Cascade. Ct. Rec. 243 at 1-2. The court agrees. Accordingly,  
18 Boise Cascade, is excluded from participation in the payment and  
19 continuing supervision of a Water Master so long as its use  
20 remains de minimus.

21 F. PLAINTIFF-TRIBES' OTHER REQUESTED RELIEF

22 1. State Jurisdiction Over Non-Indian Water Rights

23 Judge Neill held in his Opinion that the State of Washington  
24 has jurisdiction over non-Indian water rights in the Chamokane  
25 Basin, and within the Reservation, so long as it is not pre-  
26 empted by federal law and does not infringe upon Tribal rights to  
27 self-government. Ct. Rec. 189, at 15-16. The Opinion referred,  
28 in this connection, to Judge Neill's earlier decision in Colville  
29 Confederated Tribes v. Walton, 460 F. Supp. 1320 (1979). In the  
30

1  
2 Walton decision, Judge Neill held that federal jurisdiction over  
3 water was restricted to regulation of reserved water. Thus,  
4 held Judge Neill, state jurisdiction over surplus waters was  
5 not pre-empted by federal law and did not infringe on the  
6 Indians' right to self-government. Id. at 1333. On appeal,  
7 the Ninth Circuit held that under the Walton facts state re-  
8 gulation of water was pre-empted by the creation of the Colville  
9 Reservation.<sup>2</sup> The circuit court, however, emphasized that its  
10 decision was made easier by the fact that the entire water  
11 system (No Name System) was within the Reservation. Thus,  
12 under those circumstances, held the circuit, state regulation  
13 of a portion of the water would create jurisdictional confusion.  
14 Colville Confederated Tribes v. Walton, 647 F.2d 42, 53 (9th Cir.  
15 1981), cert. denied, \_\_\_\_\_ U.S. \_\_\_\_\_, 102 S. Ct. 657 ( ).

16 In his Report & Recommendation, Magistrate Myers stated  
17 that the Walton Ninth Circuit decision raised a question as to  
18 whether state regulation of surplus water in the Chamokane  
19 Creek Basin is similarly pre-empted by federal law. Ct. Rec.  
20 235 at 15. The Magistrate concluded that the force of the  
21 Walton Ninth Circuit decision does not preclude state juris-  
22 diction under the facts presented in this case. This court  
23 agrees based on the following rationale:  
24 -----

25 2  
26 This was the holding on rehearing. In its original opinion,  
27 filed August 20, 1980, the reviewing court held that the state  
28 may regulate water not reserved for the Indians. This opinion  
29 was withdrawn and replaced by the opinion upon rehearing.

1 The narrow issue in this case is whether the state may  
2 regulate excess waters on land owned by non-Indians inside the  
3 Reservation where the water system arises and partly flows  
4 outside the reservation and where the amount of excess water is  
5 small relative to the amount of reserved water.

6 At the outset it should be noted, that although the twin  
7 barriers, pre-emption and infringement on Tribal self-government,  
8 are independent, they are nevertheless related by the concept of  
9 Tribal sovereignty. Colville Confederated Tribes v. Walton, 647  
10 F.2d at 56. The doctrine of federal pre-emption evolved from an  
11 1832 Supreme Court decision, Worcester v. Georgia, 31 U.S. (6  
12 Pet.) 515 (1832). See also, Cherokee Nation v. Georgia, 30 U.S.  
13 (5 Pet.) 1 (1831); Johnson v. McIntosh, 21 U.S. (8 Wheat) 543  
14 (1823). In 1980, the Supreme Court in White Mountain Apache  
15 Tribe v. Bracker, 448 U.S. 136 (1980), laid down a specific rule  
16 for analyzing pre-emption claims in Indian cases generally and in  
17 cases involving non-Indians on Reservations particularly. See  
18 also, White Mountain Apache Tribe v. Arizona, 649 F.2d 1274 (9th  
19 Cir. 1981). The Court stated where "a State asserts authority  
20 over the conduct of non-Indians engaging in activities on the  
21 Reservation," the Court must make "a particularized inquiry into  
22 the nature of the state, federal and tribal interests at stake,  
23 an inquiry designed to determine whether, in the specific  
24 context, the exercise of state authority would violate federal  
25 law." Id. at 145. This rule, rather than normal rules of  
26 federal-state pre-emption must be applied in Indian cases. See  
27 Bracker, 448 U.S. at 143. From this Supreme Court decision it is  
28 clear that equal weight is given to the competing interests of  
29 the state in regulating the affairs of non-Indians, the firm

30  
31  
32 MEMORANDUM AND ORDER GRANTING, IN PART,  
MOTIONS TO AMEND - 24

1 federal policy of promoting Tribal self-sufficiency and economic  
2 development, and the tradition of Indian sovereignty over the  
3 Reservation and Tribal members. No Congressional statute  
4 specifically pre-empts state regulation of surplus non-reserved  
5 water located within the exterior boundaries of an Indian  
6 Reservation. But see, Public Law 280, 28 U.S.C. § 1360 (1976),  
7 25 U.S.C. §§ 1322 through 1326 (1976) (states may not exercise  
8 jurisdiction over Tribal reserved waters). Nor is there a  
9 pervasive federal regulatory scheme that works to pre-empt state  
10 regulation of non-Indian users on the Reservation.

11  
12 The fact that water per se lies within the exterior bound-  
13 aries of an Indian Reservation does not necessarily negate a  
14 state's interest in overseeing its useage along with the other-  
15 in-state water systems. Washington is obligated to regulate and  
16 conserve water consumption for the benefit of all its citizens.  
17 Therefore, the state's special concern is shared with, not  
18 displaced by, similar Tribal and federal interests when water is  
19 located within the boundaries of both the state and the Reserv-  
20 ation. The weight of the state's interest depends, in large  
21 part, however, on the extent to which waterways or aquifers  
22 transcend the exterior boundaries of Indian country. In the  
23 Walton decision, the stream in question was small, non-navigable,  
24 and located entirely within the Reservation. The circuit court  
25 determined that water use by non-Indians would have a direct and  
26 immediate negative impact on Tribal agriculture and fishery  
27 projects. Thus, the circuit court held that even though some  
28 portion of the Creek was found to be surplus to the Tribe's need,  
29 state regulation of the remaining supply would create juris-  
30 dictional confusion and violate Tribal sovereignty. The court  
31

1 thereupon found federal pre-emption of any state jurisdiction. In  
2 contrast, the Chamokane Creek arises outside the Reservation, and  
3 its course, for a good share of its length, continues to be  
4 outside. When it comes to the Reservation, it forms the eastern  
5 boundary, and much of the land with state water rights is  
6 immediately adjacent to the Creek. See Report & Recommendation  
7 analysis, Ct. Rec. 235 at 15. The facts in this case are  
8 readily distinguishable from the facts in the Walton case. By  
9 weighing the competing federal, Tribal and state interests at  
10 hand, it is clear under the balancing test mandated by the  
11 Supreme Court in Bracker, that the mere creation of the Spokane  
12 Indian Reservation does not pre-empt state regulatory juris-  
13 diction over surplus non-reserved waters on the Reservation. This  
14 determination is to be distinguished from the state court subject  
15 matter and personal jurisdiction determinations recently an-  
16 nounced by the Ninth Circuit. See Northern Cheyenne Tribe, et  
17 al. v. Adsit, et al., 668 F.2d 1080, 1087 (9th Cir. 1982); San  
18 Carlos Apache Tribe v. Arizona, 668 F.2d 1093 (9th Cir. 1982).

19 This Bracker pre-emption analysis, by balancing interests,  
20 focuses on the extent to which federal law has removed the  
21 states' power, which would otherwise have been possessed, over  
22 non-Indians on a Reservation. Analysis of the right of self-  
23 government, on the other hand, focuses on whether state action  
24 impairs the ability of a Tribe to exercise traditional govern-  
25 mental functions. See Washington v. Confederated Tribes of  
26 Colville, 447 U.S. 134 (1980); Williams v. Lee, 358 U.S. 217  
27 (1959); Santa Rosa Band of Indians v. Kings County, 532 F.2d 655  
28 (9th Cir. 1975), cert. denied, 429 U.S. 1038 (1977). Thus, while  
29 self-government is related to federal pre-emption in the sense  
30

1 that both depend on Congressional action and in the sense that  
2 pre-emption is considered in the context of deeply ingrained  
3 traditional notions of tribal sovereignty, the self-government  
4 doctrine may be an independent barrier to state regulation. Crow  
5 Tribe of Indians v. Montana, 650 F.2d 1104, 1110 (9th Cir. 1981)  
6 citing White Mountain Apache Tribe v. Bracker, 448 U.S. at 140.

7 Tribal self-government extends only to intra-tribal relations  
8 and to concurrent civil authority for visitors to Reservations.  
9 Montana v. United States, 450 U.S. 543, 564-65 (1981). Infringe-  
10 ment then, must come from state action which interferes with  
11 Indian control over Indian internal affairs. This court does not  
12 conclude that the creation by state law of property interests in  
13 surplus waters for non-Indian landowners presumptively has this  
14 effect. A recent Supreme Court decision supports this conten-  
15 tion. In Montana v. United States, 450 U.S. 543 (1981), the Court  
16 held that in the absence of Congressional delegation, a Tribe's  
17 inherent power to regulate the conduct of non-Indians in Indian  
18 country was impliedly withdrawn as a necessary result of the  
19 Tribe's dependent status. Exceptions to this implied withdrawal  
20 exist. Where the conduct of non-Indians so threatens or has such  
21 a "direct effect on the political integrity, the economic  
22 security, or the health or welfare of the Tribe", inherent tribal  
23 regulatory powers are preserved. Montana v. United States, 450  
24 U.S. at 566. The Ninth Circuit in Walton held that state regula-  
25 tion of the water system in that case infringed on the Colville  
26 Tribe's right to self-government. 647 F.2d 42 at 43. Therefore,  
27 the court concluded state regulation over non-Indian water rights  
28 on the Reservation was unlawful. In this case it is clear that  
29 Indian rights are recognized as superior to any of the non-Indian  
30

1 water rights and if the Indians choose to irrigate all the  
2 irrigable land, they would consume all or substantially all of  
3 the water in the Creek. Further, the Indian water right for  
4 preservation of the lower Chamokane fisheries requires that state  
5 recognized diversions be reduced when necessary to keep the flow  
6 up and the temperature down, in the Creek below Chamokane Falls.  
7 Therefore, as stated by the Magistrate, "no jurisdictional  
8 confusion is to be anticipated from the state allocation of  
9 surplus water, in a system of what is recognized to be sub-  
10 ordinate rights". Ct. Rec. 235 at 16. This court does not  
11 believe that this state regulation of some portion of these  
12 excess waters would unlawfully infringe on the Tribe's water  
13 rights.

14 In his Report & Recommendation, Magistrate Myers recommended  
15 that no change be made in Judge Neill's ruling as to state water  
16 rights and state regulatory jurisdiction as to non-reserved  
17 waters on the Spokane Indian Reservation. Ct. rec. 235 at 16. For  
18 the reasons stated, this court agrees. The Tribe's objections to  
19 Magistrate Myers' Report & Recommendation regarding recognition  
20 of state regulatory jurisdiction on the Reservation are accord-  
21 ingly DENIED. See Ct. Rec. 237 at 2-5.

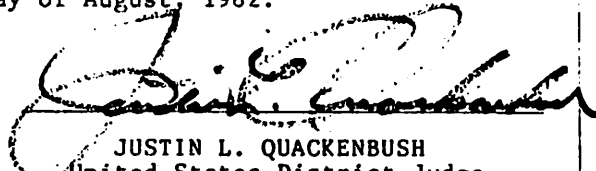

22 2. Alternative Source of Water.

23 In his Report & Recommendation, Magistrate Myers noted the  
24 state's contention that since the Spokane River provides an  
25 alternative source of water to irrigate the agricultural lands on  
26 the Reservation, the Tribe should not be considered to have  
27 reserved rights to water from the Chamokane Creek. See Ct. Rec.  
28 235 at 16. Upon independent consideration, this court agrees  
29 with the Magistrate's conclusion that the state's argument cannot

be reconsidered under Rules 52 and 59. Id. Hence, no change may be made in Judge Neill's Opinion or Judgment based upon the possible alternative source of water argument.

DATED this ~~23<sup>rd</sup>~~ day of August, 1982.

JUSTIN L. QUACKENBUSH  
United States District Judge
